

ChatGPT and Claude for Filipinos.

How to use two AI tools to earn money online — no hype, no promises, just what the research shows.

20

pages

10

ready-to-use prompts

100%

free

This guide is for Filipinos who want to earn money online. It explains what ChatGPT and Claude actually do, how they are different, and how real people use them to get paid — based on data, not YouTube thumbnails.

All income figures in this guide are sourced from PSA, DOLE, Wise.com, OKGames, and Ecomobi (2025–2026). Results depend on your skills, effort, and consistency. This guide does not guarantee income.

This is not a hype guide.

You have probably seen a lot of content online about AI tools — "Make ₱50,000 a month with ChatGPT!" — with no real explanation of how. This is not that.

This guide explains what ChatGPT and Claude actually are, how they are different, and three specific ways you can use them to earn money online. Every income number in this guide comes from a real source. Every claim is backed by data.

Who this guide is for

Filipinos who are new to AI tools, or using them but not sure if they are doing it right. People who want to earn extra income online — freelancing, VA work, or selling digital products. Anyone who has tried to learn this before but found the guides too technical or too US-focused. People who want to know the truth — not a sales pitch.

How to use this guide

- Read it in order. Each section builds on the previous one.
- Try the prompts. There are 10 ready-to-use prompts starting on page 14. Copy them, edit the brackets, and try them today.
- No paid subscription needed. Both ChatGPT and Claude have free tiers that are enough to start.
- Keep this as a reference. Come back when you need to look something up.

What you will know by the end of this guide

The real difference between ChatGPT and Claude · Which tool to use for each type of work · Three ways Filipinos are earning money using these tools · 10 prompts you can use right now to start

Note on free tools

Every tool mentioned in this guide has a free version. You do not need to spend money to start. If and when you decide to upgrade, that is your choice — this guide will not push you toward any paid product.

What Are ChatGPT and Claude?

Both ChatGPT and Claude are AI assistants. You type a message, they respond. You can ask them to write something, explain something, summarize a document, help you think through a problem, or do almost any task that involves working with text.

They are different products made by different companies. ChatGPT is made by OpenAI, which is backed by Microsoft. Claude is made by Anthropic, which is backed by Amazon. Both have free tiers you can use right now without a credit card.

	ChatGPT	Claude
Made by	OpenAI	Anthropic
Free version	Yes (GPT-4o)	Yes (Claude.ai)
Paid plan	\$20/month (Plus)	\$20/month (Pro)
Image creation	Yes — DALL-E built in	No
Web search	Yes (free tier)	Yes (with tool)
Best known for	Versatility and image creation	Writing quality and long documents

The most useful thing to know right now

The question is not which one is better. They are both good. The real question is: which one is better for the specific task you need to do? That is what this guide will show you.

The Real Difference Between Them

— Part 1

People often ask: "Which AI is smarter?" That is not the right question. Both tools are capable. The difference is in what they are each good at. Here is an honest breakdown, based on what people actually use them for.

Where ChatGPT has an edge

- Image creation. ChatGPT has DALL-E built in. You can describe an image and it will generate one in seconds. Claude cannot do this.
- Web search. ChatGPT can search the internet for current information — news, prices, recent events. This is available on the free version.
- Voice conversations. ChatGPT has a more advanced voice mode, which is useful if you prefer talking over typing.
- GPT Store. OpenAI has a store of specialized AI tools built on top of ChatGPT. Some of these are useful for specific work tasks.
- Brand recognition. More clients and employers have heard of ChatGPT. This can matter when you are offering AI-related services.

Best uses of ChatGPT for earning online

Creating images for social media posts or client work. Researching topics quickly before writing. Generating visual content for digital products. Demos and presentations to clients who know the ChatGPT name.

The Real Difference Between Them

— Part 2

Where Claude has an edge

- Writing quality. Claude tends to produce text that reads more naturally. It is harder to tell it was written by an AI. This matters when you are writing for clients.
- Long documents. Claude can handle very long texts — full contracts, research papers, long articles. You can paste a long document and ask it to summarize or analyze it.
- Following complex instructions. If you give Claude a detailed, specific instruction, it tends to follow it more precisely. Useful for templates and structured outputs.
- Analysis and reasoning. For breaking down a complex problem step by step, Claude is generally more careful and thorough.
- Coding explanations. Even if you are not a developer, Claude can explain what code does or help you troubleshoot in plain language.

Best uses of Claude for earning online

Writing blog posts, articles, and email newsletters for clients. Drafting business proposals and client-facing documents. Summarizing long reports or contracts. Creating scripts, captions, and content that sounds human.

The Cyberussell shortcut

Need an image or fast research? → Use ChatGPT
Need something written well? → Use Claude
Not sure? → Try both. Pick the better output.

Which One Should You Use?

Use this table every time you are not sure. It is based on the actual strengths of each tool, not opinion.

The task	Use this	Why
Create a social media image	ChatGPT	Has built-in image generation (DALL-E)
Research a topic quickly	ChatGPT	Can search the web in real time
Write a blog post	Claude	Better writing quality, sounds more natural
Write a client email or proposal	Claude	Cleaner, more professional output
Summarize a long PDF or document	Claude	Handles longer documents better
Write 30+ social media captions	Claude	More consistent tone across multiple posts
Create a video script	Claude	More natural sentence flow
Generate an image for a product	ChatGPT	Only ChatGPT has image generation
Explain a business idea clearly	Either	Both are good — try both and compare
Translate Filipino to English	Either	Both handle this well
Write a digital product (eBook)	Claude	Longer context, better writing quality

Way #1 — Freelance Writing and Content Creation

One of the fastest ways to earn online is to write things for other people. Blog posts, product descriptions, email newsletters, social media captions — businesses need this content constantly, and most of them do not have someone to write it. With AI tools, you can produce good work faster than before.

What the data says about writing income in the Philippines

₱300 per page — what Filipino writers earn for copy and content (Wise.com, 2026) Social media management for international companies: ₱25,000–₱45,000/month (OKGames, 2026) Freelance content writers typically earn ₱10,000–₱30,000/month after 6–18 months (OKGames, 2026) These are real figures from real sources. Results depend on your skills and how many clients you have.

How AI fits into this

- Use ChatGPT to research a topic before you write. Ask it to summarize the key points on a subject, then use that as a starting point.
- Use Claude to write the first draft. Claude produces writing that is harder to identify as AI-generated, which matters for clients.
- You edit the draft. Add your perspective, specific examples, or client-specific details. The AI handles the structure; you handle the voice.
- You deliver the final version. You used AI the same way a photographer uses a camera — it is a tool, not the skill.

Important

Some clients specifically ask for content that is not AI-generated. Always read the brief. If a client requires human-written content, use AI only for research and planning — not for writing the final text.

Where to Find Clients for Writing Work

Fiverrfiverr.com

Set up a gig (a service listing). Clients come to you. Slower to start, but more passive once you have reviews.

Upworkupwork.com

You apply to job postings. More competitive, but the rates are generally higher.

OnlineJobs.phonlinejobs.ph

Built for Filipinos working remotely. Many employers here specifically want Filipino workers.

Facebook Groupsfacebook.com

Search 'Philippine Freelancers', 'Pinoy Online Jobs', 'Remote Work Philippines'. Jobs are posted daily by real people.

Direct outreach[Email or Messenger](#)

Contact local businesses in Isabela and Region II. Offer to write their website content or Facebook posts.

One action step

Sign up on Fiverr today. Create one gig: 'I will write a 500-word blog post about [your niche].'
Use Claude to write your gig description — paste this prompt: 'Write a Fiverr gig description for a Filipino freelance writer offering blog posts about [topic]. Max 250 words. Professional but approachable.'

Way #2 — Virtual Assistant Work

A Virtual Assistant (VA) is someone who works remotely to help a business owner or entrepreneur with tasks they do not have time for — managing emails, scheduling, research, social media, customer service, and more. The Philippines is one of the most established markets for VA work in the world.

28,915

Average monthly income of Filipino Virtual Assistants

Source: Wise.com, 2026

How AI makes you a better VA

- Email drafting. A client gives you the key points. You use Claude to write a polished email in seconds. You review, send.
- Research summaries. A client needs a summary of a competitor's website or a news topic. Use ChatGPT to research and summarize it in minutes.
- Social media content. Use Claude to write 30 days of captions in one session. Space them out and schedule.
- Meeting notes and summaries. Paste a meeting transcript into Claude and ask for a clean summary with action items.
- Customer support replies. Create a set of template replies using Claude. Customize slightly for each customer.

The key difference AI makes

Without AI: a VA might handle 5–8 tasks per day. With AI: the same VA can handle 15–20 tasks per day at higher quality. This means you can serve more clients, charge more, or work fewer hours. The choice is yours.

How to Package and Price Your VA Services

Starter

8,000 – 10,000/month

- 10 hours per week
 - Email drafting and inbox management
 - Basic research and summaries
 - Social media captions (15 posts/month)

Standard

15,000 – 18,000/month

- 20 hours per week
 - Everything in Starter
 - Meeting notes and action items
 - 30 days of social media content
 - Basic customer support replies

Full-time

22,000 – 28,000/month

- 40 hours per week
 - Everything in Standard
 - Blog post drafting (2 per month)
 - Monthly content calendar
 - Email newsletter drafting

These are suggested ranges based on market data. Your actual rate depends on your experience, the complexity of the work, and the client's budget. Start at the lower end and raise your rate as you build a track record.

Way #3 — Digital Products

A digital product is something you create once and sell repeatedly — an eBook, a template, a checklist, a guide, a mini-course. No inventory. No shipping. No storage. Once it is made and listed, it can earn money while you sleep.

Examples of digital products Filipinos are already selling

A ₱99–₱299 eBook about freelancing, AI tools, or online selling Canva templates for social media (logo kits, post templates) Resume and CV templates designed for OFW applicants A step-by-step guide: 'How to Start Freelancing as a Filipino' A printable Filipino meal planner or budget tracker A mini-course on how to use a specific AI tool

How to create a digital product using AI

01 Choose a topic

What does your audience need help with? Look at questions in Filipino Facebook groups. The most common questions are the best topics.

02 Create an outline with Claude

Prompt: 'Create a 10-chapter outline for an eBook about [topic] for Filipino beginners. Each chapter should have 3 sub-topics.'

03 Write it section by section

Use Claude to write one section at a time. Review and edit each one before moving to the next.

04 Design it in Canva

Use a free Canva account. Choose a clean template. Add your content. Export as PDF.

05 List it on Gumroad or Shopee

Gumroad is free to set up and works well for digital downloads. Shopee also has a digital product option.

The 99 Starting Point

You do not need a big, expensive product to get started. A simple, useful ₱99 guide — on the right topic, for the right audience — is enough to prove that you can earn online. The first sale is the hardest. After that, it gets easier.

If you sell	Monthly income	What this requires
10 copies/month	990	A small, active Facebook group or a few people who trust your content
50 copies/month	4,950	A consistent content strategy — 1–2 posts per day for 2–3 months
200 copies/month	19,800	An established audience and regular promotion across platforms

The honest reality

These numbers are possible — but they are not guaranteed and they are not instant. OKGames (2026) reports that the average new freelancer takes 2–4 weeks before earning their first peso online. Digital product sellers typically take 1–3 months to find an audience. The people who earn consistently are the ones who started, failed, adjusted, and kept going.

10 Prompts You Can Use Right Now — Part 1

Copy these prompts. Paste them into ChatGPT or Claude. Edit the parts inside [brackets] to match your situation. These are starting points — adjust them as you learn what works.

#01

Write a blog post draft

Claude

Use with: Claude

Write an 800-word blog post about [topic]. Target audience: [who they are]. Tone: clear and direct, not too formal. Include subheadings. Do not start with "In this blog post..." or "Today we will discuss..." Start with the most interesting thing about the topic.

#02

Research a topic before writing

ChatGPT

Use with: ChatGPT

Give me 5 specific facts about [topic] that are relevant to Filipino readers in 2025–2026. Include the source for each fact if you know it. I need this for a blog post.

#03

Write a client email

Claude

Use with: Claude

Write a short, professional email to a potential client. I offer [your service]. They run [type of business]. The goal is to get a short call or conversation. Keep it under 100 words. Direct and respectful. Do not use the phrase "I hope this email finds you well."

#04

Write a Fiverr gig description

Claude

Use with: Claude

Write a Fiverr gig description for a Filipino freelancer offering [your service]. Maximum 300 words. Start with one strong sentence that explains what the buyer gets. Include 3 bullet points of deliverables. Add a short FAQ with 2 questions. Friendly but professional tone.

#05

Write 10 social media captions

Claude

Use with: Claude

Write 10 Instagram or Facebook captions for [business or personal brand]. Mix of informative, personal, and promotional posts. Each caption: maximum 3 sentences. Include one call to action per caption. Tone: honest and direct, not salesy.

10 Prompts You Can Use Right Now — Part 2

#06

Write an eBook outline

Claude

Use with: Claude

Create a detailed outline for a ₱99 eBook about [topic] for Filipino beginners. Include 10 chapters. Each chapter should have 3 sub-topics. Write the chapter titles and sub-topics only — no full content yet. Make it practical and focused on things the reader can actually do.

#07

Write a VA services proposal

Claude

Use with: Claude

Write a short proposal for a Virtual Assistant role. I am applying to work for [type of business, e.g. a US-based e-commerce store]. My skills include [list your skills]. My rate is \$[X] per hour. Keep it under 200 words. Include: what I will do, how I will communicate, and why I am a reliable choice.

#08

Create an image prompt for social media

ChatGPT

Use with: ChatGPT

Write a DALL-E image prompt for a social media post about [topic]. The image should look clean and modern. No text in the image. Style: flat design, bright colors. Square format (1080x1080px). The image should work well as a background for a motivational or educational post.

#09

Summarize a long document

Claude

Use with: Claude

Here is a [contract / article / report]. Please summarize it in 5 bullet points. Include: the main topic, any specific numbers or dates, the key decisions or conclusions, and any action items or next steps.
[Paste your document below this line]

#10

Write a pitch message for a local business

Claude

Use with: Claude

Write a short pitch message for a local business in [city/province]. I am offering [service: social media content / website writing / etc.]. Keep it under 5 sentences. Friendly, not pushy. Filipino business owners prefer a conversational tone. Do not mention prices yet — just open the conversation.

Build your own prompt library

Save these prompts in a Google Doc or Notion page. As you use them, edit and improve them. After a few weeks, you will have a personal collection that is tuned to how you work.

Common Mistakes About AI And the Truth

There is a lot of misinformation about AI tools — in both directions. Some people think AI will solve everything automatically. Others think it is dangerous or useless. Here is a more accurate picture.

COMMON BELIEF

AI will replace my job.

WHAT THE RESEARCH SHOWS

AI replaces tasks, not people. Specifically, it replaces the most repetitive parts of certain jobs. The people who learn to use AI tools are the ones who stay competitive. The ones who ignore it are at risk — not from AI itself, but from other people who know how to use it.

COMMON BELIEF

You need to be tech-savvy to use AI.

WHAT THE RESEARCH SHOWS

If you can type a message on Facebook, you can use ChatGPT or Claude. These tools are designed for everyday use, not just for programmers. The biggest skill you need is knowing how to ask good questions — which anyone can learn.

COMMON BELIEF

AI will make you rich quickly.

WHAT THE RESEARCH SHOWS

AI is a tool, not a shortcut to money. Like any tool, the results depend on how you use it and how much effort you put in. OKGames (2026) reports that new online earners take 2–4 weeks to make their first peso. Building consistent income takes months, not days.

COMMON BELIEF

Everything AI says is accurate.

WHAT THE RESEARCH SHOWS

This is a real risk. AI tools can and do make mistakes — especially with facts, numbers, and recent events. Always verify important information before using it in work you deliver to a client. Treat AI output as a first draft, not a final answer.

The Philippine Income Reality

Understanding why online income matters in the Philippines is not about motivation — it is about context. The data tells a clear story.

2.41M**Filipinos currently unemployed***PSA Labor Force Survey, April 2026***6.03M****Filipinos who are employed but want more income***PSA, LFS March 2026***12.3%****National underemployment rate (March 2026)***Philippine Statistics Authority***11.2%****Unemployment rate in Isabela Province, Region II***PSA Regional Labor Statistics, 2025***2.5M+****Filipinos already earning income online***Philippine Freelance Economy Report, 2025***28,915****Average monthly income of Filipino VAs***Wise.com, 2026***55,000****Monthly income of a Filipino online English teacher (6 hrs/day)***OKGames, 2026*

What this means for you

The situation is difficult — but the opportunity is real. 2.5 million Filipinos are already earning online. The tools exist. The platforms exist. The demand exists. The main gap is knowing where to start and having someone show you how, based on actual data — not YouTube thumbnails. That is what cyberussell.com is for.

03 Digital Products

What you do

Create and sell eBooks, templates, guides, or checklists online.

Tools

Claude (content) · ChatGPT (image concepts) · Canva (design)

Where to start

Gumroad · Shopee · Facebook

Income range

Depends on volume — ₱990 to ₱19,800/month or more

The honest summary

None of these paths are instant. All of them are real. The Filipinos who are earning online today started exactly where you are — with no clients, no audience, and no guarantee. They started anyway.

You finished the guide.

Here is what to do next.

Step 1

Open ChatGPT or Claude right now.

Use one of the 10 prompts from pages 14–15. Just try one. See what comes back.

Step 2

Choose one of the three earning paths.

Writing, VA work, or digital products. Pick the one that fits your situation most right now. You can always add more later.

Step 3

Visit cyberussell.com for more free guides.

There are interactive tools, data-backed guides, and a skill-to-income matcher — all free, no email required.

cyberussell.com

Free. No sign-up. No payment. Share with people who need it.
