Russell Parayno

Senior AI Software Engineer | Full-Stack Developer | React, Next.js, TypeScript | Building AI-Powered SaaS Applications
Metro Manila

Summary

I'm an AI Software Engineer with 15+ years of experience building production-ready software solutions that solve real business problems. I specialize in developing scalable SaaS applications, AI-powered platforms, and workflow automation using React, Next.js, TypeScript, Node.js, Supabase, Firebase, PostgreSQL, and modern cloud technologies. I use AI-assisted development with tools like Claude Code to accelerate delivery while remaining responsible for software architecture, code quality, debugging, testing, security, and production deployments. I believe AI enhances engineering—it doesn't replace sound technical judgment. My experience includes designing and developing appointment scheduling systems, hotel and laundry management platforms, territory management systems, CRM solutions, AI-powered business applications, and custom web platforms. I've built multi-tenant SaaS products with authentication, role-based access control, subscription billing, payment integrations, APIs, analytics dashboards, and workflow automation. Beyond software development, I bring more than a decade of experience leading projects, managing cross-functional teams, and improving business operations. This allows me to bridge the gap between technical implementation and business objectives, delivering software that is scalable, maintainable, and aligned with user needs. I enjoy collaborating with startups and businesses to transform ideas into production-ready applications, modernize existing systems, and build AI-enabled solutions that improve efficiency and create measurable business value.

Core Expertise• AI Software Engineering & AI-Assisted Development• Full-Stack Development (React, Next.js, TypeScript, Node.js)• SaaS Architecture & Multi-Tenant Applications• Firebase, Supabase & PostgreSQL• AI Automation & Workflow Optimization• REST APIs & Third-Party Integrations• Authentication & Role-Based Access Control• Cloud Deployment & DevOps• Product Development & Solution Architecture• Technical Leadership & Agile Collaboration

I build software that solves business problems—not

just software that works. By combining engineering expertise with AI-assisted development, I help organizations deliver better products faster without compromising quality or maintainability.

Experience

Senior Full Stack AI Engineer

March 2022 - Present (4 years 6 months)

I'm a Senior Full Stack AI Engineer with 15+ years of experience designing, architecting, and building scalable software solutions—from business systems and SaaS platforms to AI-powered web applications.

I specialize in developing modern full-stack applications using Next.js, React, TypeScript, Node.js, PostgreSQL, and Supabase, delivering secure, high-performance solutions that solve real business problems. My expertise spans the entire software development lifecycle, including solution architecture, frontend and backend development, authentication, REST APIs, database design, cloud deployment, and production support.

I leverage AI tools such as Claude Code and the OpenAI API to accelerate development, automate workflows, and improve engineering productivity while maintaining high standards for software architecture, code quality, security, and maintainability. I believe AI is a powerful engineering partner—not a replacement for sound software design and technical judgment.

My recent work includes building multi-tenant SaaS platforms, appointment scheduling systems, hotel and laundry management systems, AI-powered business applications, CRM integrations, analytics dashboards, subscription-based products, and workflow automation solutions. I enjoy translating complex business requirements into scalable, maintainable systems that create measurable business value.

Beyond software development, I bring extensive experience in project leadership, business analysis, and cross-functional collaboration, enabling me to bridge the gap between technical implementation and business objectives.

Core Technologies

• Next.js • React • TypeScript • Node.js • PostgreSQL • Supabase • Firebase
• Tailwind CSS • REST APIs • OpenAI API • Claude Code • Vercel • GitHub •
SaaS Architecture • Solution Architecture • AI Workflow Automation

Payjobs.work Manpower Services

Owner/Developer

October 2023 - August 2026 (2 years 11 months)

Roxas, Isabela

I am a software developer, AI enthusiast, and digital entrepreneur with more than 15 years of experience building technology solutions from concept to deployment.

I founded Cyberussell to help Filipinos navigate the rapidly changing digital economy through practical education in artificial intelligence, freelancing, content creation, social media, automation, and online entrepreneurship. My mission is simple: help people develop valuable skills that create opportunities regardless of location, educational background, or financial status.

Throughout my career, I have built web applications, mobile platforms, automation systems, and business solutions while continuously exploring how emerging technologies can empower individuals and small businesses. I believe that technology should not be reserved for large corporations—it should be accessible to anyone willing to learn and adapt.

A significant part of my journey has been creating digital products, educational content, and AI-powered workflows that demonstrate how ordinary people can leverage technology to improve their careers, businesses, and livelihoods. Through Cyberussell, I share practical insights, research, tutorials, and real-world applications designed to make complex technologies understandable and actionable.

Previously, I developed BayanihanX, a community-focused platform inspired by the Filipino spirit of bayanihan. While the project has since been retired, the experience reinforced my belief that technology is most valuable when it solves real problems for real people.

Today, my focus is on helping Filipinos build future-ready skills and embrace opportunities created by AI, digital platforms, and the global online economy.

R.A. 2017, Inc.

Project Executive

June 2017 - July 2025 (8 years 2 months)

Taguig

Only a very small core group of awesome individuals, R.A.2017 is responsible for the development of Mobile Application for Blue Collar workers in the Philippines. It will be a vessel for easy application and posting of jobs both for employers and job-seekers not to mention its extremely low affordability.
